

DIE SAVER™

HDF-100

With Die Quip you get more than just a machine . . .

Die Quip's Die Saver™ line of grinding and polishing machines are easy to operate, produce accurate die geometry and can work the angle or bearing. Our machines provide value to your factory by decreasing the cost per ton of the wire through longer die life.

Our HDF is a manual feed grinding and semi-automatic polishing machine. This machine is designed to cut or polish dies to the next size. Its angle setting gage and zero stop makes it easy for any operator to produce accurate die geometry.

Die Quip's HDF is built on a heavy duty structure with standard component parts. This produces a machine with a long service life and access to spare parts any where in the world.

Heavy-duty long lasting machines such as the HDF alone do not make an internal die shop as cost effective as it could be. This is why Die Quip strives to provide more than just a machine. We have the most extensive training programs to teach operators how to make dies not just push the machines buttons. This is done with on site training programs, detailed manuals and exclusive Die Making Handbook.

The HDF can be used to produce dies on its own in a small volume die shop or combined with the MGF or Die Flex MA for medium production needs.

GRINDER MODE

- Accurately shape die angle
- Repeatable results

POLISHER MODE

- Eliminate hand sizing
- Semiautomatic timed cycle
- Easy to set cutting pressure
- Increased speed for better finishes

HDF-100 SPECIFICATIONS

Internal Grinding Capacity
.020-.500" (0,51-12,0 mm)

Angle
0-60 Degrees Included

Wheel Spindle
500-9,000 RPM

Electricity
220 V, 1 PH, 50/60 HZ

Work Holding Capacity
3" 3 Jaw Chuck - 0-3" (0-76 mm)

Machine Dimensions
36 x 14 x 14" (92 x 36 x 36cm)
