

# ANGLE BONDED PINS

Die Quip's line of angled bonded grinding pins feature tungsten carbide or hardened steel shanks with diamond abrasive. We offer two different types of bonded pins, resin and copper, to meet your specific finishing needs. The resin bond is a softer and more open bond that is best used for heavier material removal in coarser grits. While the copper bond is specifically designed to replace hand finishing with diamond compound. This hard bond provides a mirror finish when used in grit sizes finer than 800.

R = Resin Bond  
C = Copper Bond

## STANDARD ANGLE BONDED PINS\*
