

WOOD & FELT BOBS

Die Quip's line of wood and felt bobs are precisely manufactured from the highest quality materials to perform better in high speed hand polishing applications. The wood bobs are best used with light to medium cutting compounds for removing light wear or polishing bell radiuses. Felt bobs are best suited for mirror polishing of dies with light diamond compounds. Polishing with a high speed hand tool with bobs is faster than with a wood stick, produces a better surface finish and significantly reduces the stress on the operators hands, wrist and forearms.

WOOD BOBS

Die Quip's line of wood bobs are precisely manufactured from highly compressed hardwood layers with alternating grain direction which is then saturated and bonded with resin then mounted to a steel shank. This produces a lapping tool that is tougher than solid wood while last longer by retaining their shape and produces better surface finishes.

FELT BOBS

Die Quip's line of felt bobs are manufactured from pure wool and are in the hard grade for best results in polishing hard materials such as tungsten carbide or ceramics. The mandrels are exactly centered to reduce run-out in high speed operations.
